

THE SOLUTION AGAINST BIOFILM & PATHOGENS

DryOx

DEEP CLEAN

KEY PRODUCT FEATURES & BENEFITS

Penetrates and removes biofilm in hard to reach places such as sand filters, balance tanks and pipe work

Removes harmful pathogens such as legionella and pseudomonas in hot tubs and swimming pools.

↓ DBPs

Reduces chlorine consumption, combined chlorine and the formation of harmful chlorine smells

FOR PORTABLE WHIRPOOLS AND HOT TUBS

To remove the biofilm in portable whirlpools and hot tubs : Add 2 to 4 tablets per 1000 liters water volume, let the system run for an hour, drain the water, rinse and refill with fresh water. Your system is now free of biofilm and bacteria! Repeat this treatment every 3 months.

FOR SWIMMING POOLS

NO BIOFILM - NO PATHOGENS

Within just a few days, bacteria colonize on all surfaces that are in contact with water. These surfaces include the pool walls but also pipes, expansion tanks and sand in filters. DryOx is the ideal product to remove biofilm from these hard to reach places fast and efficiently.

Without biofilm, chlorine consumption and the production of harmful disinfection by-products like trichloramine - responsible for the chlorine smell in the air - will decrease. Biofilm is also the habitat for dangerous pathogens such as Legionella.

DOSAGE INSTRUCTIONS

Periodic application:

Add 2 DryOx tablets per 10 m³ of water to the skimmer or the expansion tank every 4 weeks. Backwash after 15 – 30 minutes.

Intensive cleaning:

For heavily used pools, to clean pool walls, filter material, pipe system and balance tank from biofilm. For intensive cleaning we recommend 4 DryOx tablets per 10 m³ of water and one backwash after 15 – 30 minutes.
